# Racing *improves* the breed

Races can be won or lost in pit lane, and many V8 SuperCar teams have made the savvy choice to run SP Air Race Guns.

These hand-held powerhouses start life as an ever-reliable impact wrench chosen from the wide range of SP Air airtools. The compact body of a 3/4" impact gun is chosen as the donor unit. Both existing and new components are used in the three-day build process, with Master Technicians stripping the donor gun down to individual parts and inspecting it at the SP workshops in Brisbane.

The main and rear housings undergo extensive work with machining and polishing to provide perfectly matched ports with a significant increase in airflow in the first step. Further modifications to the rear housing are also made, such as an introduced CNC machined regulator developed to help optimize the flow of air through the housings. After this, work on the heavy-duty detents begins. These detents hold the regulator firmly in place and offer foolproof directional control, giving the operator confidence against accidental direction change in race conditions.

Next to receive modification is the front nose cone. A needle roller assembly is installed and machining shortens the overall length of the body, a necessary step for the introduction of a 1" anvil.

The anvil, hammer cage and air cylinder used in the SP Air Race Guns are specifically forged at the SP factory in Japan.

The build continues with porting and polishing of the air cylinder to match the ports of the main housing. The original rotor and new race cylinder are blueprinted to ensure high output motor performance.

SP Race guns operate with three times the normal operating pressure of a standard impact wrench. Despite this, the high degree of control offered at the trigger is incredible, and can be directly credited to trigger valving that has been carefully developed at the Brisbane workshop.

The last of the machining to be done is to create better airflow and introduce new, innovative seals into the trigger assembly. A closely-guarded process of heat-treating all the internal moving parts then enhances the durability of the components, and then cleaning, inspection and measuring is performed before the final assembly begins.

A set assembly procedure ensures accurate end float and internal tolerances of the components. The heating and cooling of the various components as they are fitted helps to achieve this.

An improperly-fitted gun can cost dearly in high-end performance.

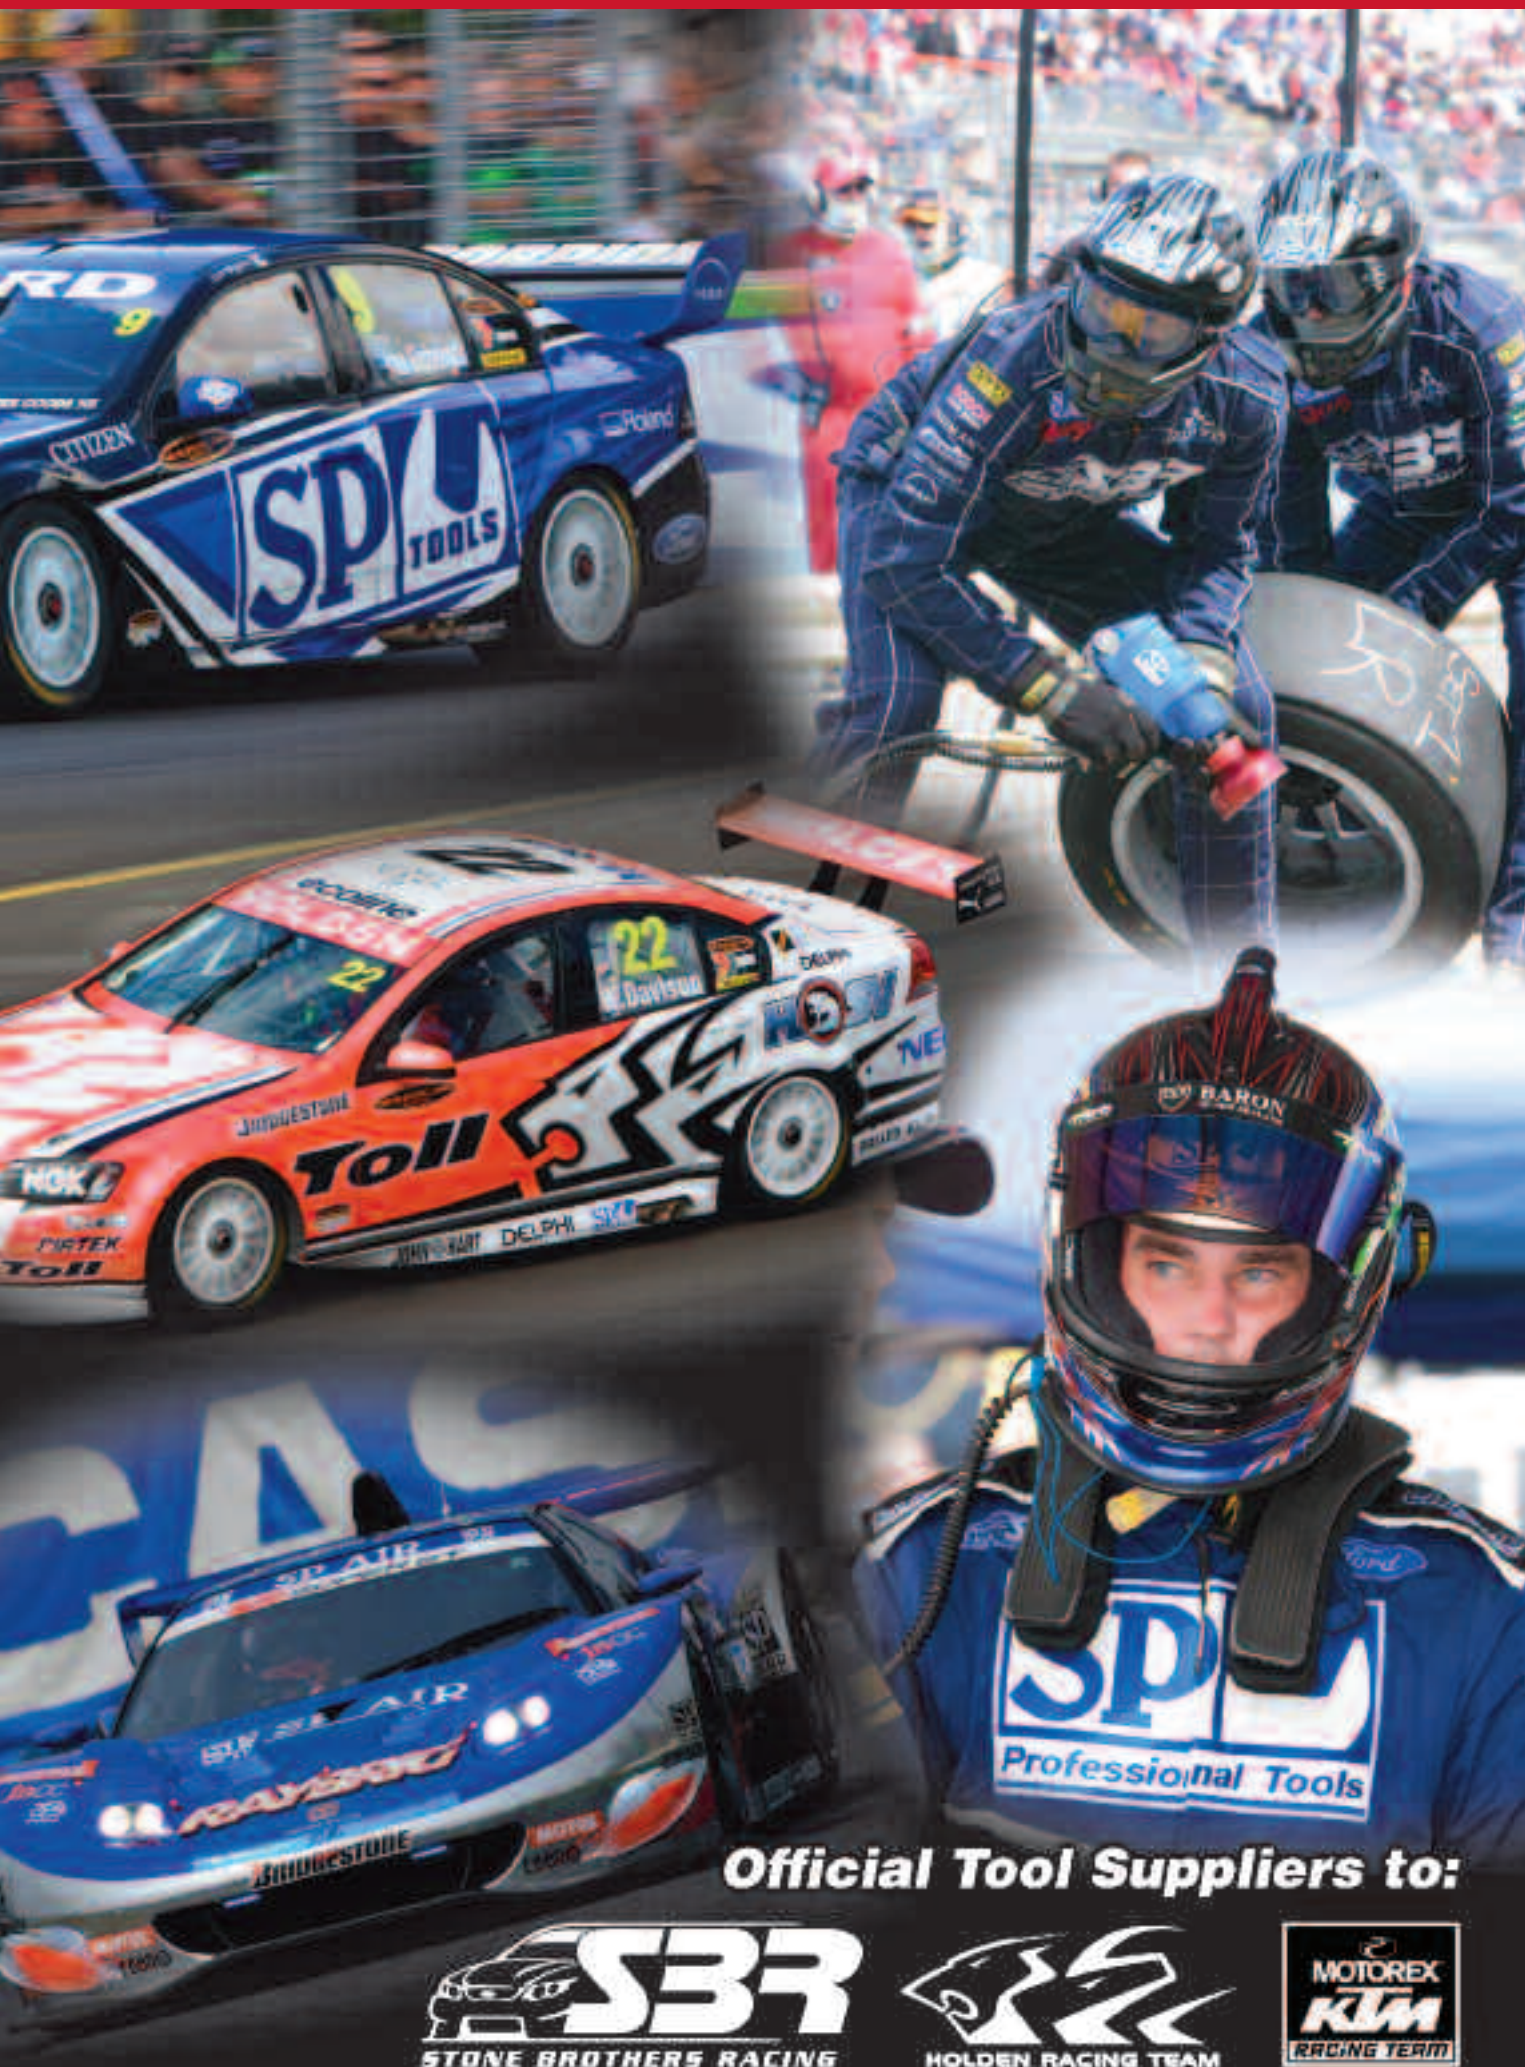

A benchmark test is then performed against an established regulated supply pressure to ensure the Race Gun's quality, and then it is tested under simulated race conditions.

With the results of this test, SP's technicians can offer operational advice to the race team when they collect their new or serviced Race Gun.

The reliability and performance consistently offered by SP Air Australia's Race Guns, utilizing leading edge components and technical innovations, has been in development for many race seasons. Through SP's partnership and participation with V8 Supercar teams, such as SBR and HRT, valuable information gained from feedback that teams provide about the performance of the Race Gun in practice and on race day has made sure that SP Air is the winning choice in pit lane.

Of course, the technology that is developed in making these thoroughbred performers is passed on to the consumer in developing superior off-the-shelf products right through the range of SP tools, proving once again the old axiom, "racing improves the breed."

# Impact Sockets

**Sets in metal cases**

**Flat drive technology**

**Industrial strength Cr-Mo material**

**At SP, we know what it takes to make a good impact socket because we've been making impact wrenches for 30 years. Using premium quality molybdenum steel, we have developed a range of sockets that can withstand the ever increasing impact torque that today's high powered tools produce.**

- *Chrome molybdenum steel for maximum strength and durability*
- *Flat drive technology to maximize grip*
- *Manufactured to DIN standards*
- *Wide range from 3/8" to 2-1/2" drive*

**Please note:** Some sizes may only be available from an international office. Please contact our office for delivery details

- Flux coated

# Precision Measuring

- Dual scale windows - Nm, ft/lbs

**Easy read gauge**

**Easy read LCD display**

**Three trigger switches**

**The SP range of Measuring Tools are more than just functional. They are durable and finished with attention to detail.**

- Alloy and steel surfaces have been treated to create a finish that is resistant to oxidation and wear
- All torque wrenches are calibrated and tested

## **Torque Wrench Safety**

The SP range of Torque Wrenches are calibrated and tested ex-factory to have a minimum degree of accuracy of  $\pm 4\%$ . As such, torque wrenches are a precision measuring instrument and should be stored and used with this in mind. SP suggests the following instructions be followed to maintain the torque wrench.

- Always store in storage box provided
- Always return torque wrench to minimum setting before storage
- Have torque wrench re-calibrated by a trained professional at least once a year
- Never mistreat torque wrench by using hammers, extension handles or similar.

# Electrical Diagnostic Tools

**Digital & analogue display**

**Easy wire piercing**

**The SP Diagnostic Tools are designed to be the first choice amongst professionals.**

- All electronic items are manufactured and calibrated within strict guidelines
- All units have large easy read LCD displays
- Combination stethoscope set has 6 channel pick up, which allows the user to do onroad tests and monitor up to 6 locations with the flick of a switch

**WARNING:** Multimeters are designed to test electrical systems. These systems may have “dangerous voltage” present. Multimeters should only be operated by experienced personnel with accredited training. The incorrect use of a multimeter could result in an electric shock which may cause serious injury or death.

**The SP Electrical Tool range is designed to meet the needs of auto-mechanical electricians.**

- The battery load tester is able to quickly identify battery and/or charging problems
- The automotive circuit testers have unique features such as polarity display and multiple voltage sensitivity

**WARNING:** Circuit testers are designed to test electrical systems. These systems may have “dangerous voltage” present. Circuit testers should only be operated by experienced personnel with accredited training. The incorrect use of a circuit tester could result in an electric shock which may cause serious injury or death.

# Engine & Brake Tools

**Smooth jaws to prevent hose damage**

**Precision measurement offset feeler gauges**

**The SP Brake Tool range is designed to improve work output for brake technicians.**

- The SP range of line clamps have been developed to enhance the performance of existing designs. Extensive research and development has been implemented to achieve these designs.

**The SP Engine Repair and Servicing Tools are made to meet and exceed the demands of automotive service technicians.**

- The new swivel handle oil filter wrenches have ergonomic easy grip handles combined with heavy duty stainless steel band
- The new 10 piece bearing race and seal driver set is colour coded to allow easy selection for common wheel bearing races

**Always wear safety goggles & gloves when using engine repair, service tools and brake tools. Brake fluid is a toxic substance. If brake fluid contacts skin, wash off immediately and contact doctor for further advice.**

# Pullers & Separators

**Tie rod separator**

**Tough CRV heat treated jaws**

**The SP Pullers and Separators are manufactured from the best quality heat treated steels to ensure that maximum torque and impact can be applied.**

- All pullers are made from alloy steel or premium chrome vanadium steel
- The separators are drop forged from a single piece of steel for extreme durability and strength. The ends are additionally induction heat treated to resist damage from repeated striking

**Always wear safety goggles & gloves when using pullers and separators.**

**SP Ratchet Wrenches have an induction hardened ratchet head which minimises the risk of spreading and lessens the likelihood of loss of power.**

*SP Air Ratchets are tested in accordance with ISO Standards 2787, 8662 and 3744. If you want to increase the life of your air ratchet, do the initial loosening and final tightening of a bolt by hand. You can use your air ratchet as a hand ratchet but the key is don't ask anymore of it than you would a normal hand ratchet. If a hand ratchet won't undo it, then neither will your air ratchet.*

**The SP-7131 comes with an ergonomic polymer grip. It also has a larger motor producing higher torque and a 360 degree air inlet swivel. It has an adjustable rear exhaust.**

**Model SP-1257 and SP-1261 can be used with a wire brush**

**SP Angle Grinder Safety Governor:**  
As the tool rotates, the pendulum weights are forced out by centrifugal force and then by mechanical connection push the plunger air controller into the air intake thus reducing the available air which limits the speed.

**SP Angle Grinders Features:**

- Safety throttle levers to prevent accidental start ups
- Hardened and ground spiral bevel gears for low vibration
